Ok, thanks. Well, since it has been several years from that last meeting, and there are many new stakeholders, more members of the public and other agencies now involved, would that be an issue.

Donn, I would be happy to consider this when the time comes. Availability may be an issue, as always. Since I facilitated there once before, it would also be important to know if the key players would accept me as a neutral facilitator. But I would be happy to talk to you when you need someone.

Please change my email from DBSheridan@aol.com to dbsfacilitator@gmail.com. Hopefully someone pretending to be me has not been pestering you with weird emails.

Diane

Subject: Potential difficult public meeting.

Hello, Diane. Still early, but I wanted to contact you about possibly working with us a little later in the year to facilitate a challenging community meeting for the San Jacinto site. I know you are already familiar with that project. This major meeting has been pushed back to late summer, or early Fall now. However, the last meeting was very difficult to manage, and the CAG believes a skilled Neutral would be a better approach for the agency.

Just a heads up for now.

And thank you for your recent interest with the S. Cavalcade project.
